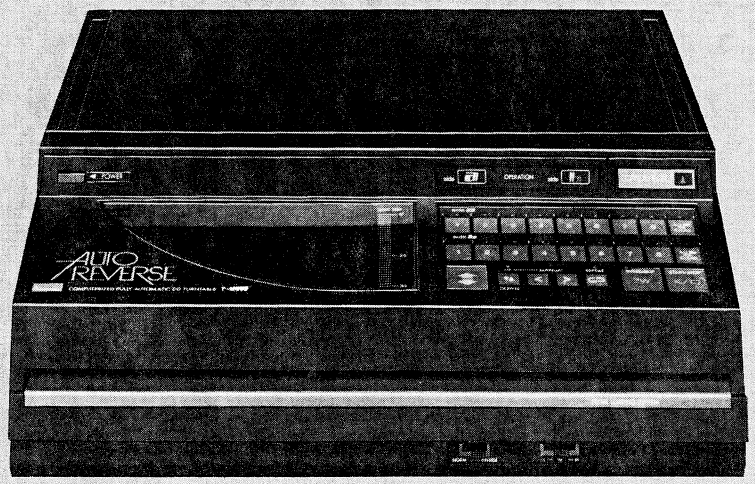
SERVICE MANUAL

COMPUTERIZED FULLY AUTOMATIC DD TURNTABLE

SANSUI P-M900

(Black Model)



NOTE

P-M900 is additional model which external appearances are different from those of P-M90.
This manual contains OTHER PARTS LIST, PACKING LIST and ACCESSORY LIST in which changed parts are printed with bold-face.
For other parts list, refer to P-M90 service manual previously issued.

Sansui

SANSUI ELECTRIC CO., LTD.

•SPECIFICATIONS

Type	Direct-drive turntable
Rated speeds	33-1/3, 45 rpm
Platter	76 mm (3") diameter, 0.37 kg weight
Motor	Brushless & Coreless DC (FG-Servo)
Wow/flutter	0.08% (WRMS)
Signal-to-noise ratio	Better than 72 dB (DIN-B) Better than 60 dB (IEC-B)
Tonearm	Dynamically-balanced straight type
Effective tonearm length	70 mm (2-3/4")

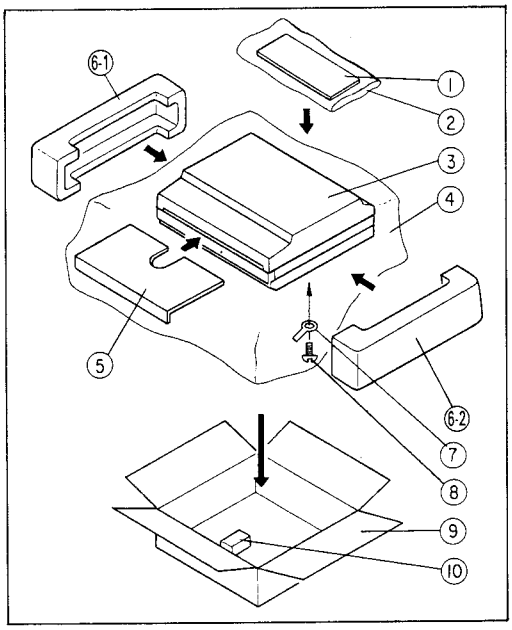
Cartridge

Type	Dual Magnet type
Output voltage	2.5 mV (1,000 Hz, 35.4 mm/sec)
Correct load impedance	47 kohms
Frequency response	10 ~ 20,000 Hz
Stylus	0.6 mil diamond stylus (SN-909 replacement stylus)
Power voltage	110 ~ 120V/220 ~ 240V (50/60 Hz)
For U.S.A. and Canada	120V (60 Hz)
Power consumption	25W
Dimensions	350 mm (13-13/16") W 120 mm (4-3/4") H 355 mm (14") D
Weight	7.2 kg (15.9 lbs.) net 8.6 kg (19.0 lbs.) packed

* Design and specifications subject to change without notice for improvements.
* Due to local laws and regulations, this unit sold in some areas are not equipped with variable voltage selectors.

1. PACKING LIST

Parts No.	Stock No.	Description
1	———	Accessories (Sound Absober)
2	———	Polyethlen Bag
3	———	Turntable
4	47859600	Vinyl Bag
5	13285400	Corrugated Board
6-1	13287710	Styrofoam Packing (Left Side)
6-2	13287810	Styrofoam Packing (Right Side)
7	———	Tag
8	00423400	Transit Screw, 4X16 Binding
9	47942100	Carton Case
10	———	Bottom Packing

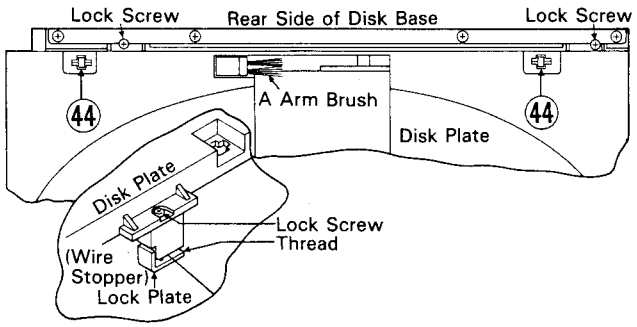


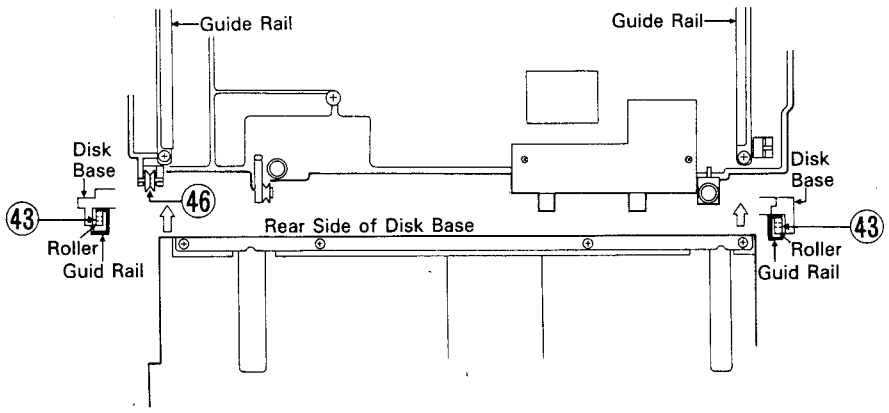
2. ACCESSORY LIST

Stock No.	Description
48181600	2P Plug Cord
46980600	Operating Instruction
	Accessories (Sound Absover)
13308100	Wooden Board (Front Side)
13308000	Wooden Board (Rear Side)
13307900	Pipe
13145100	Insulator
46971900	Operating Sheet

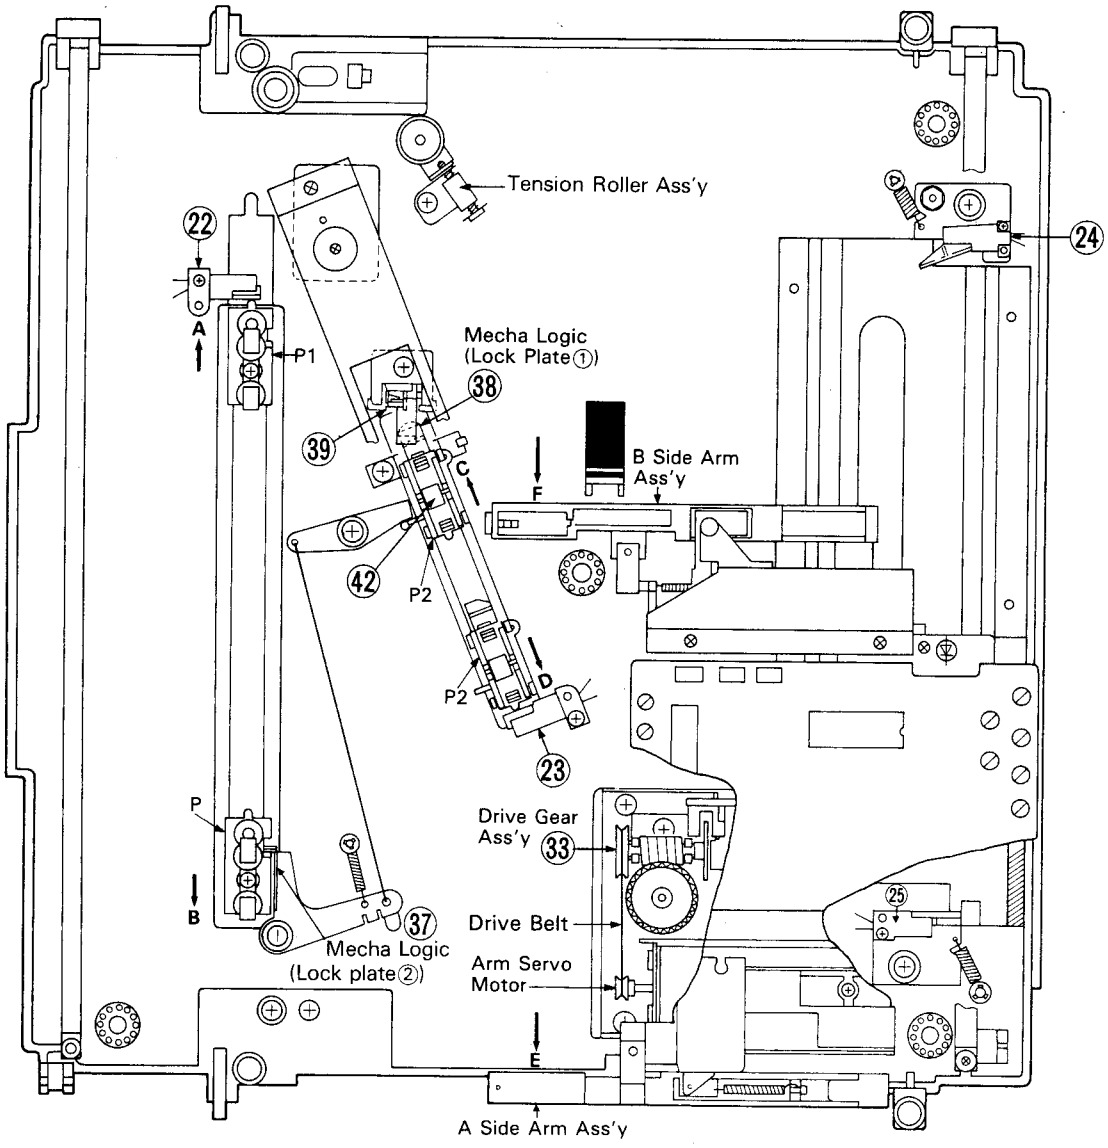
3. OTHER PARTS

3-1. Disk Base and Disk Plate

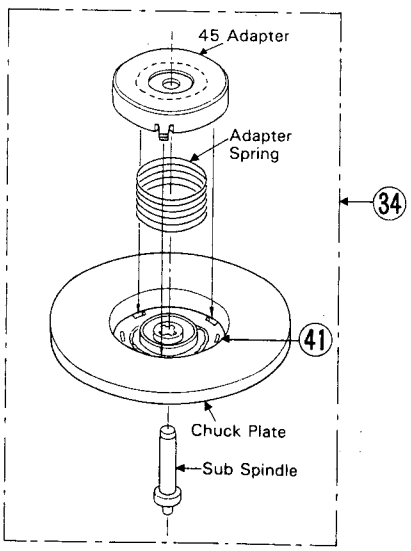




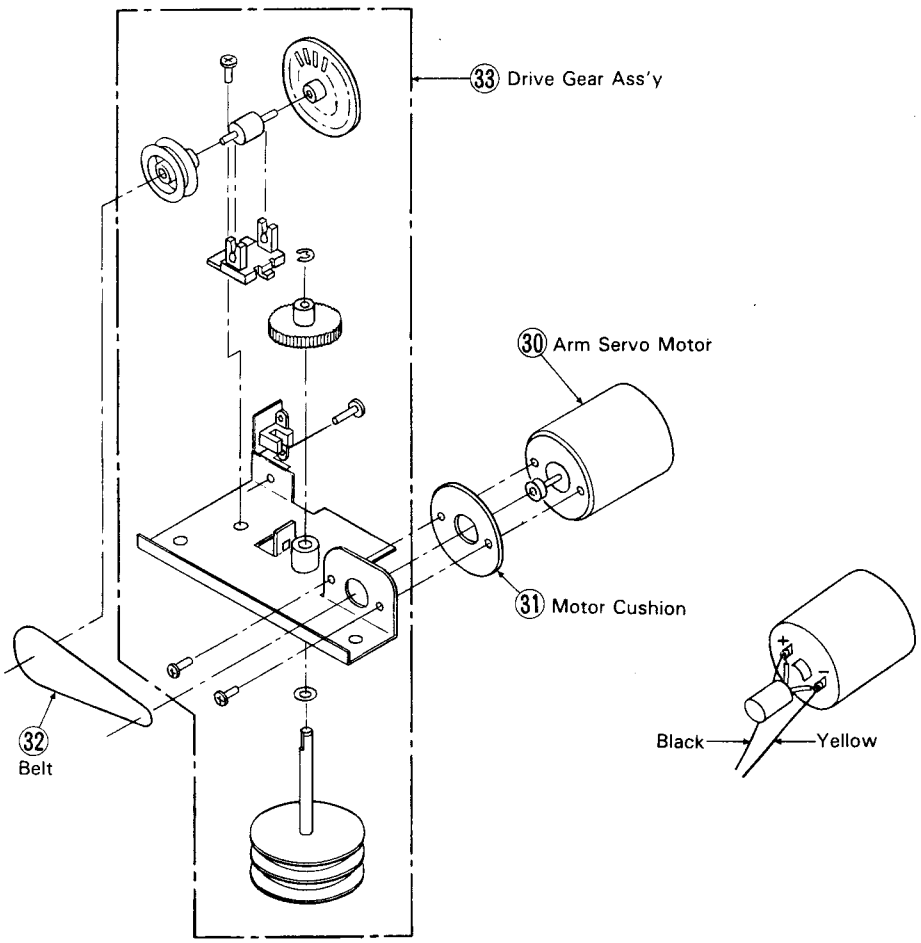
3-4. Top View of Main Chassis



3-5. Chuck Plate Ass'y



3-6. Arm Servo Motor



Parts List

Parts No.	Stock No.	Description
1	13290020	Top Plate
2	**13294840**	**Key Board Ass'y <XX,CSA,EU,BS, AS>**

12	13234400	Output Cord with Pin Plug <XX,CSA,EU,BS,AS>
	13234500	Output Cord with Pin Plug <UL>
⚠ 13	46413900	Push SW., POWER
14	**47745700**	**Knob, POWER Switch**
15	18096400	Disk Base Ass'y
16	18096600	Disk Plate Ass'y
17	13274000	Pick-up Brush A
18	13274100	Pick-up Brush B

Parts No.	Stock No.	Description
19	18083900	DD Motor for Disk Driver (with S-0260)
20	13260300	T.T. Sheet
21	13260410	Lock Bush
22	46926900	Micro Switch, disk open
23	46926900	Micro Switch, chuck ON
24	46925200	Micro Switch, B arm reset
25	46925200	Micro Switch, A arm reset
26	18095700	A Side Arm Ass'y
27	13284410	A Side Lifter Ass'y with Plunger A
28	18095400	B Side Arm Ass'y
29	13284510	B Side Lifter Ass'y with Plunger B,C
30	46935700	Arm Servo Motor
31	13288900	Motor Cushion
32	13281100	Drive Belt
33	18085600	Drive Gear Ass'y
34	18086300	Chuck Plate Ass'y
35	13289100	Switch Case
36	13266710	Wire Stopper (L plate) (Refer Fig:8-6 on page 16)
37	**13265300**	**Lock Plate, ②**
38	**13265010**	**Lock Plate, ①**
39	**13265700**	**Hook Arm Spring**
40	**13281000**	**Joint Bar**
41	**13279100**	**Guide Ring**
42	**13264800**	**Thrust**
43	**13265400**	**Side Roller Ass'y**
45	**13289000**	**Power Supply Switch Knob**
46	13274500	V Roller

Note: Although Parts (No.37 ~ 46) are used in model P-M90, not listed on Service Manual of P-M90.
However added as Service Parts for the reference.

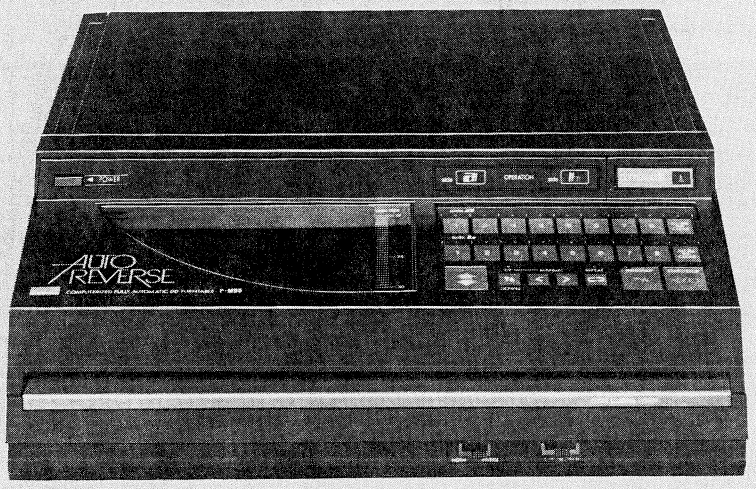
SERVICE MANUAL

COMPUTERIZED FULLY AUTOMATIC DD TURNTABLE

SANSUI P-M90

(Silver & Black Model)



CAUTION

1. Parts identified by the ⚠ symbol on the schematic diagram and the parts list are critical for safety. Use only replacement parts that have critical characteristics recommended by the manufacturer.
2. Make leakage-current or resistance measurements to determine that exposed parts are acceptably insulated from the supply circuit before returning the appliance to the customer.

Sansui

SANSUI ELECTRIC CO., LTD.

•SPECIFICATIONS

Type	Direct-drive turntable
Rated speeds	33-1/3, 45 rpm
Platter	76 mm (3") diameter, 0.37 kg weight
Motor	Coreless and Brushless DC/FG Servo
Wow/flutter	0.08% (WRMS)
Signal-to-noise ratio	Better than 72 dB (DIN-B) Better than 60 dB (IEC-B)

CAUTION

1. The symbols, UL, CSA, SA, BS, UK, EU, AS and XX on the parts list and the schematic diagram mean followings respectively.

   UL..... Manufactured for U.S.A market.
   (Underwriters Laboratories approved model.)
   CSA..... Manufactured for Canadian market.
   SA..... Manufactured for South African market.
   BS, UK ..... Manufactured for United Kingdom market.
   EU ..... Manufactured for European market.
   AS..... Manufactured for Australian market.
   XX..... Standard Version.
   NON MARK ..... Common Parts.

2. Some printed circuit boards are not supplied as the assembled. To separate these in this service manual, the stock No's are not indicated at the ends of the board names. However, the individual parts on the circuit boards are provided by orders.

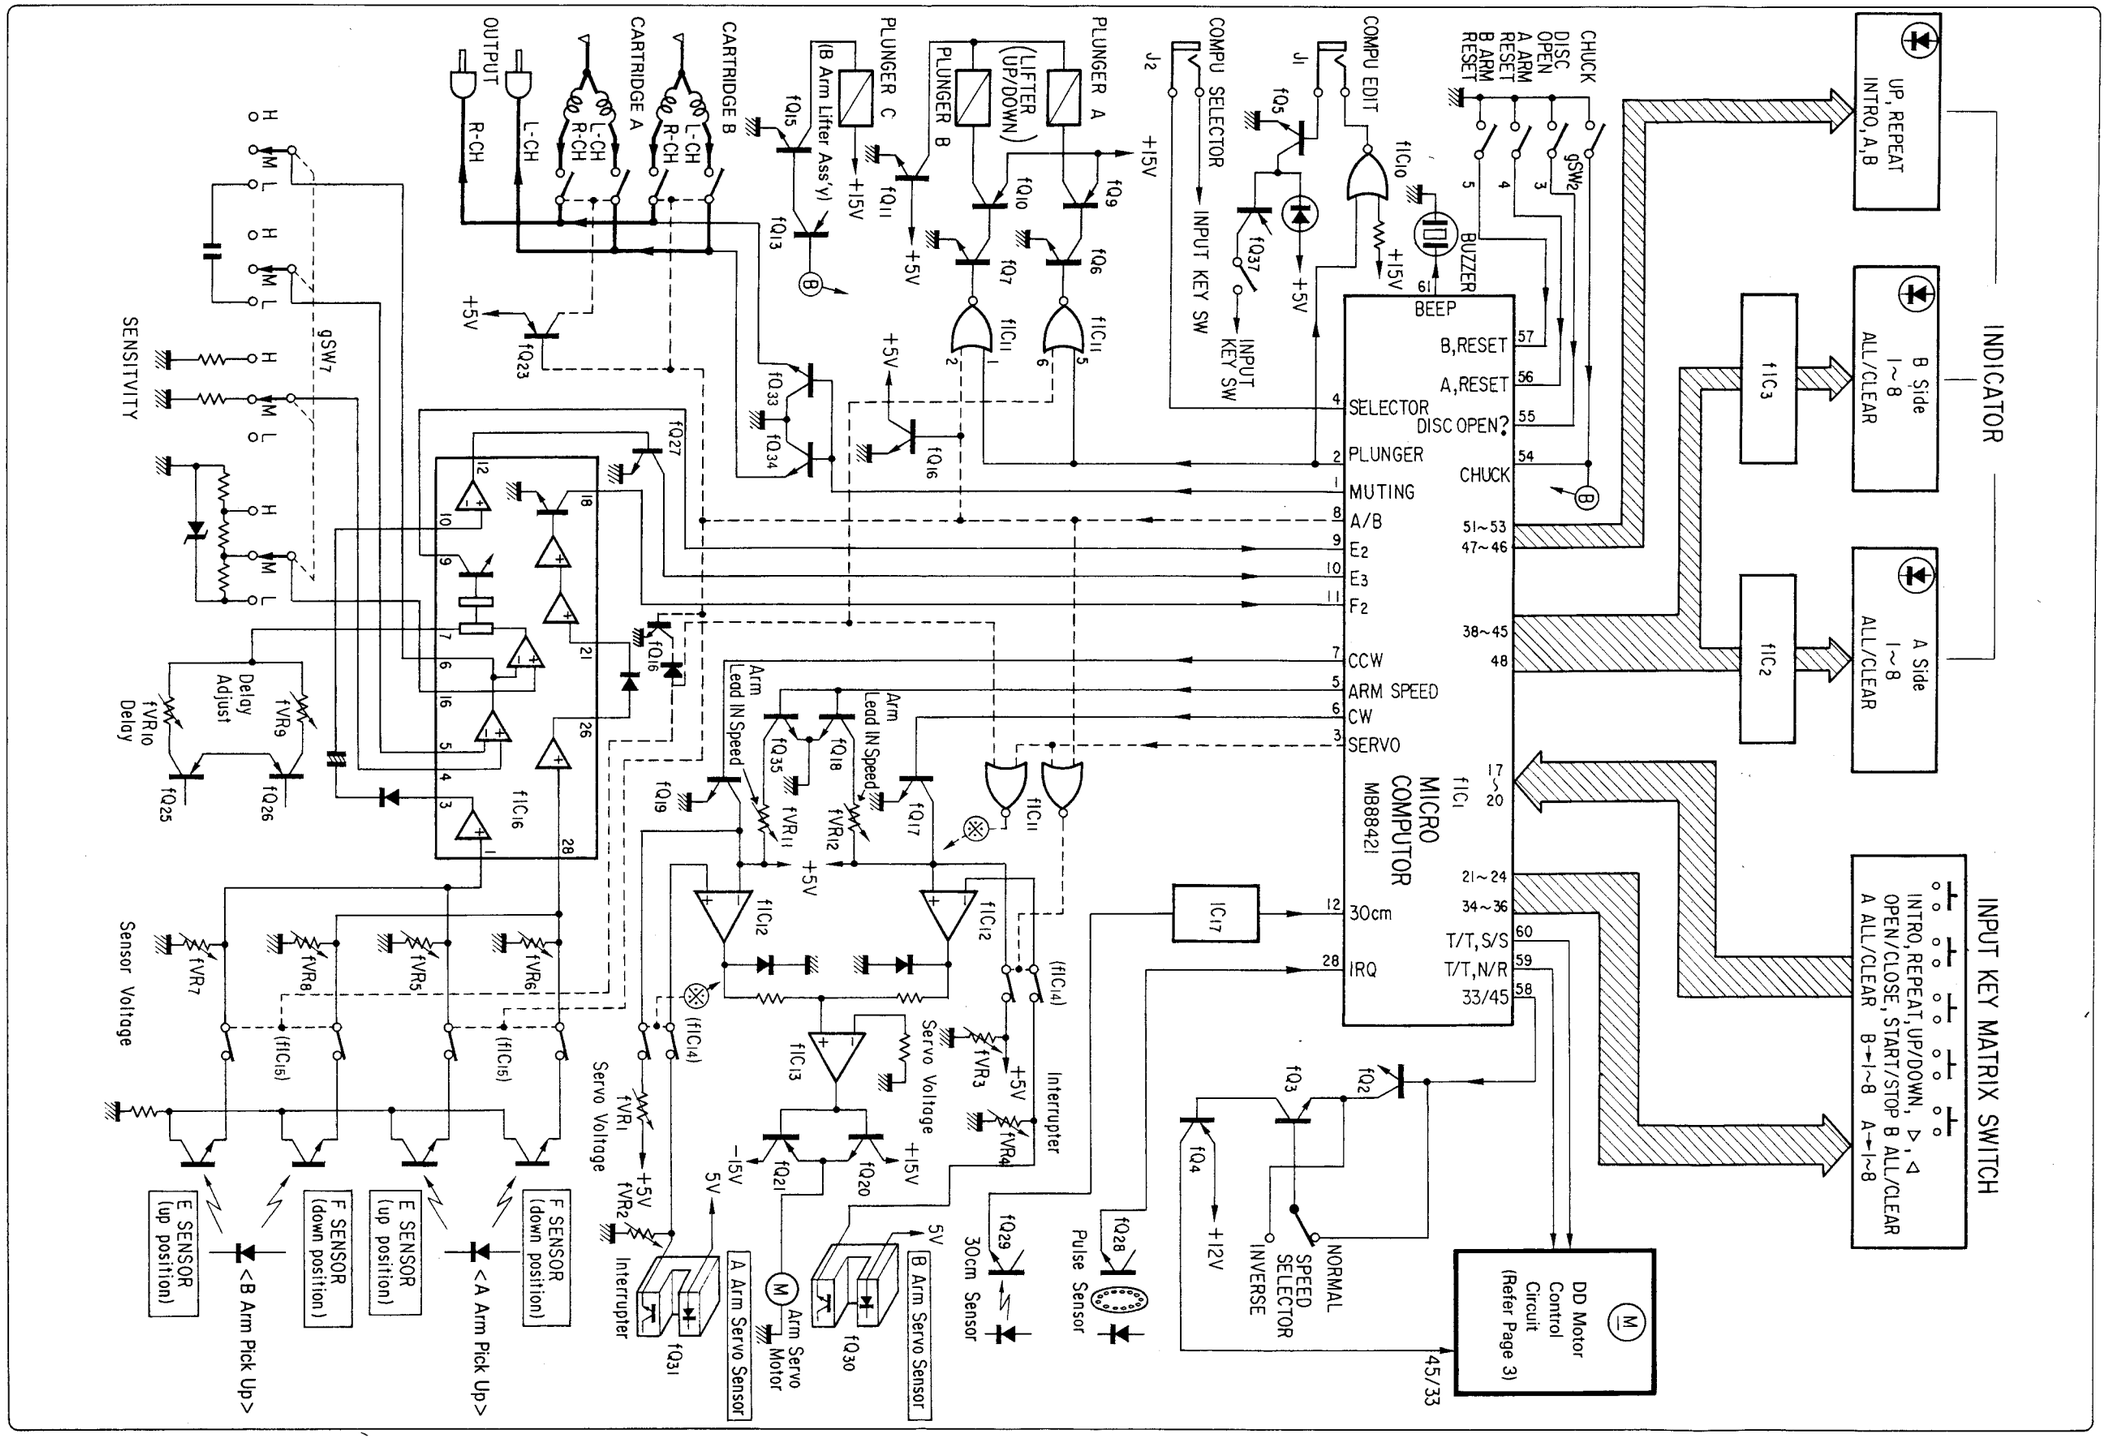
3. Since some of capacitors and resistors are omitted from parts lists in this service manual, refer to the Common Parts List for capacitors & resistors, which was issued on February 1983.

4. Abbreviations in this service manual are as follows.

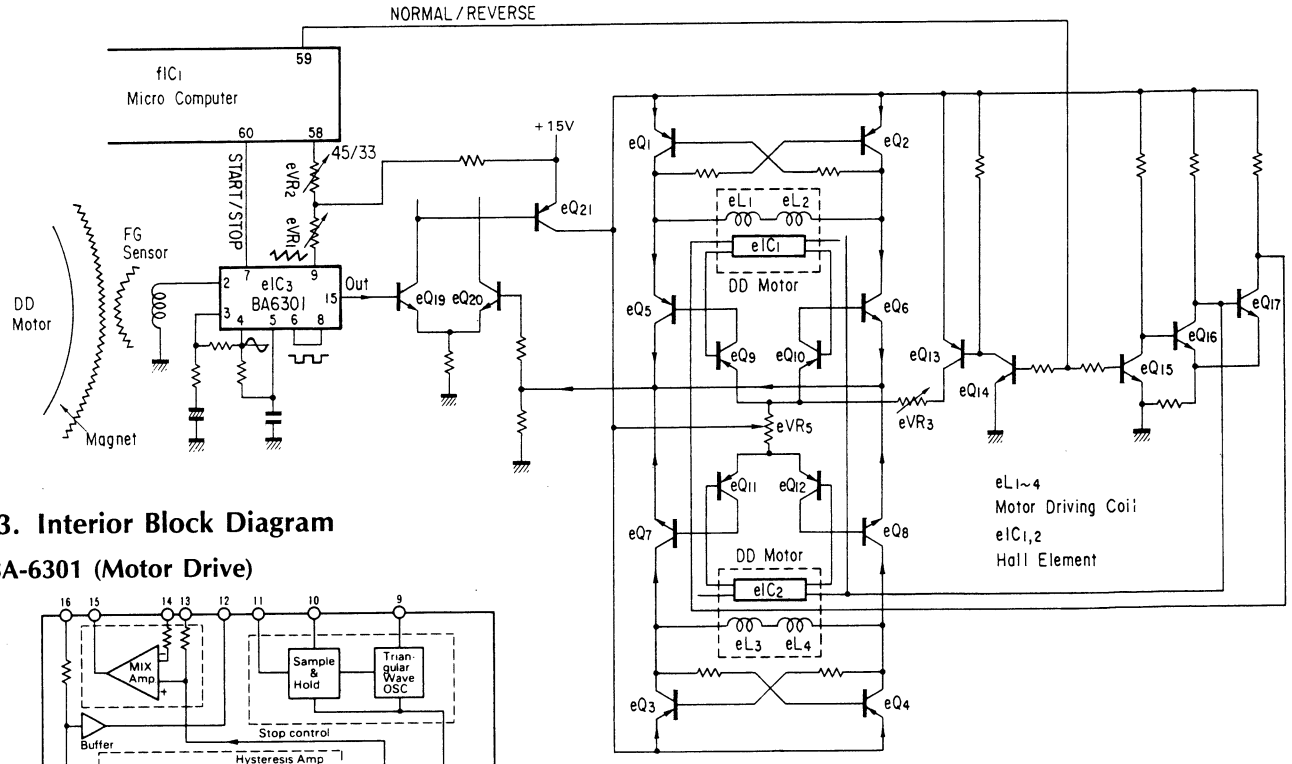
•Abbreviations List

C.R.	: Carbon Resistor	E.B.L.	: Low Leak Bi-Polar Electrolytic Capacitor
S.R.	: Solid Resistor	Ta.C.	: Tantalum Capacitor
Ce.R.	: Cement Resistor	F.C.	: Film Capacitor
M.R.	: Metal Film Resistor	M.P.	: Metalized Paper Capacitor
F.R.	: Fusing Resistor	P.C.	: Polystyrene Capacitor
N.I.R.	: Non-Inflammable Resistor	G.C.	: Gimmic Capacitor
A.R.	: Array Resistor	A.C.	: Array Capacitor
C.C.	: Ceramic Capacitor	V.R.	: Variable Resistor
C.T.	: Ceramic Capacitor, Temoerature Compensation	S.V.R.	: Semi Variable Resistor
E.C.	: Electrolytic Capacitor	SW.	: Switch
E.L.	: Low Leak Electrolytic Capacitor	Chip R.	: Chip Resistor
E.B.	: Bi-Polar Electrolytic Capacitor	Chip C.	: Chip Capacitor

1. BLOCK DIAGRAM 1-1. Arm Control Circuit



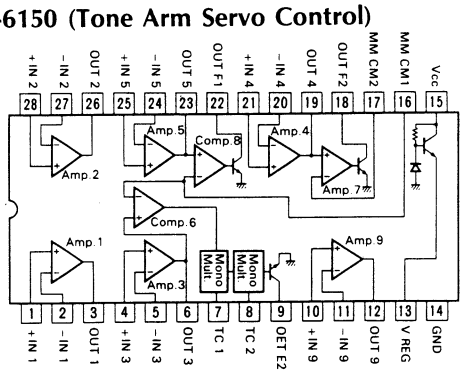
1-2. Motor Control Circuit <S-0206>



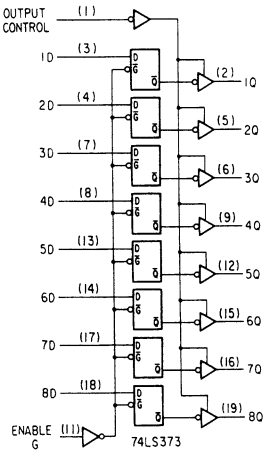
1-3. Interior Block Diagram

•BA-6301 (Motor Drive)

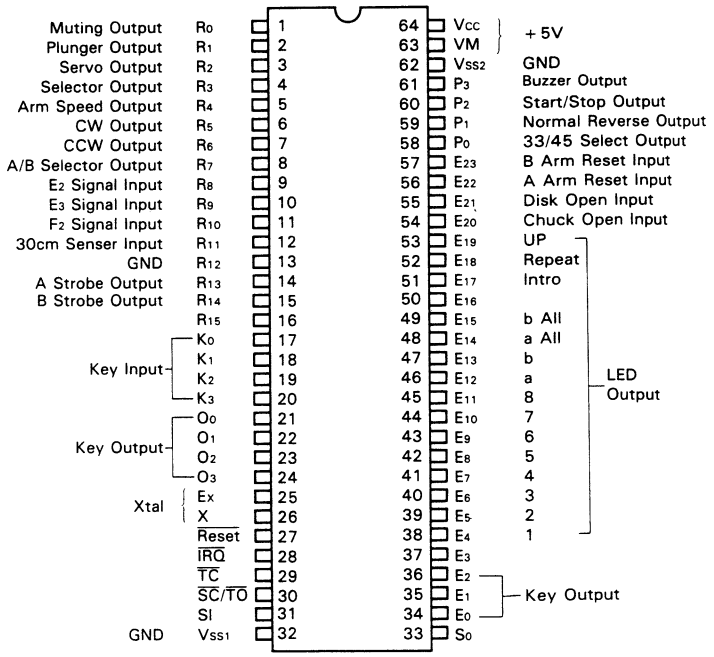
•BA-6150 (Tone Arm Servo Control)



•74LS373 (Octal 3state D-latch)



•MB88421 (Micro computer)



2. MAIN CIRCUIT FUNCTIONS

1. Pulse sensor

In the microcomputer, various motor speeds are stored, which are suitable for the reset positions and the lead-out positions of 30cm, 25cm and 17cm size record disk. The arm is moved down in combination of signals detected by the 30cm disk sensor, 25cm and 17cm disk detection signals (E_3) detected by the E sensor, and signals detected by the pulse sensors corresponding to disk sizes.

2. 30cm disk selecting sensor

The position of the arm on the arm rest is located near the lead-in position of a 30cm disk. Therefore, a separate sensor is arranged to securely select a 30cm disk, without use of the signal (E_3) detected by the E sensor.

3. E, F sensor

The signals detected by the E, F sensor are divided into three signals E_2, E_3, and F_2 through appropriate circuits.

- **E_2 signal** ..... indicates the number of counted musics, which is necessary to move down the tone arm onto the start of a desired music during the automatic music selection operation.
- **E_3 signal** ..... indicates the presence or absence of a 25cm or 17cm size disk.
- **F_2 signal** ..... indicates the detection of a music intermission during automatic music selection operation (tracing operation) and detection of the end of the last music. The arm is lifted up in combination of this F_2 signal and the pulse sensor signals.

4. Delay circuit

Since the E sensor is located about 3mm ahead of the stylus tip, it is necessary to delay the signal detected by the E sensor electrically. By adjusting this circuit, it is possible to eliminate the signal detection error caused by mismatching of the mechanism operation.

5. Music selection sensitivity switching circuit

The signals E_2, F_2 are converted into three different stages in order to perform an accurate automatic music selection operation.

6. CHUCK switch (gSW_2)

This switch detects that a record disk is perfectly mounted.

7. DISK OPEN switch (gSW_3)

This switch detects that the disk plate is pulled out perfectly.

8. A, B ARM RESET switches (gSW_4, gSW_5)

These switches detect that the A, B arms are reset, respectively.

9. Muting operation timing

- During the automatic disk selection operation and the manual operation, the muting is off when the lifter is down but on when the lifter is up.
- When the stylus goes down onto a music intermission interval during the automatic music selection operation, the muting is off 1.7 secs after the stylus begins to go down. Further, when the stylus goes down onto a modulated groove near the end of the preceding music, the muting is off the instant the succeeding music intermission is detected.

•Input Key Matrix of Microcomputor IC MB88421

NO.	Key Name	Key Matrix	NO.	Key Name	Key Matrix	NO.	Key Name	Key Matrix

⑤ Disk Motor Play
⑥ Arm Servo OFF
⑦ Lifter UP
⑧ Muting ON
⑨ Arm Servo ON
⑩ Lifter Down
⑪ Muting OFF

4. ADJUSTMENT

A. Preparation

1. Remove the top plate (No.1 in Part list excluding circuit boards). See "How to replace the main parts" on page 16.
2. Remove only the key board from the front panel, and then connect three connectors extending from the key board to the S-0208 computer board.
3. Since the TP pins of S-0209 board may disappear under the motor frame when the arm moves, connect some wires to the TP pins necessary for adjustment. (See Fig. 4-1)
4. Turn on the interlock switch in accordance with the following procedure:
   1) Remove two small screws for mounting the interlock switch.
   2) Roll up an appropriately sized paper as shown, insert the rolled paper into the contact portion of the microswitches, and then fixed it by an adhesive tape.

B. Caution

1. The A-arm and B-arm are mechanically linked with each other. Further, the reset position of A-arm corresponds to the lead-out position of B-arm.
   Therefore, it is possible to know the B-arm position on the basis of the A-arm position. However, positively depress each key ALL a, ALL b, [<], and [>].
2. The adjusting control knob (variable resistor) of S-0209 may disappear under the motor frame as the arm moves.
   Therefore, adjust it through an adjusting aperture formed in S-0208. (See Fig. 4-3)
3. In case the operation keys are inoperative, turn off the main power switch and then turn on it again before depressing the operation keys.
4. Perform the adjustment in accordance with the determined procedure.

Fig. 4-1

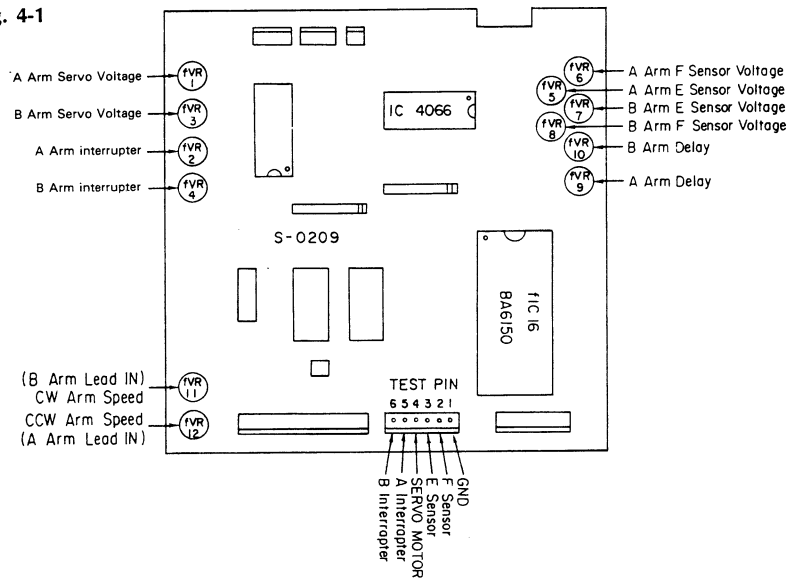

Fig. 4-2

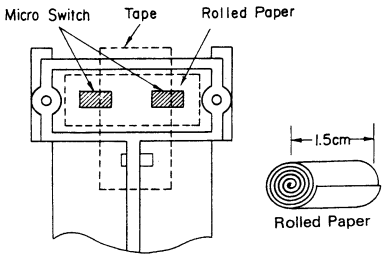

Fig. 4-3

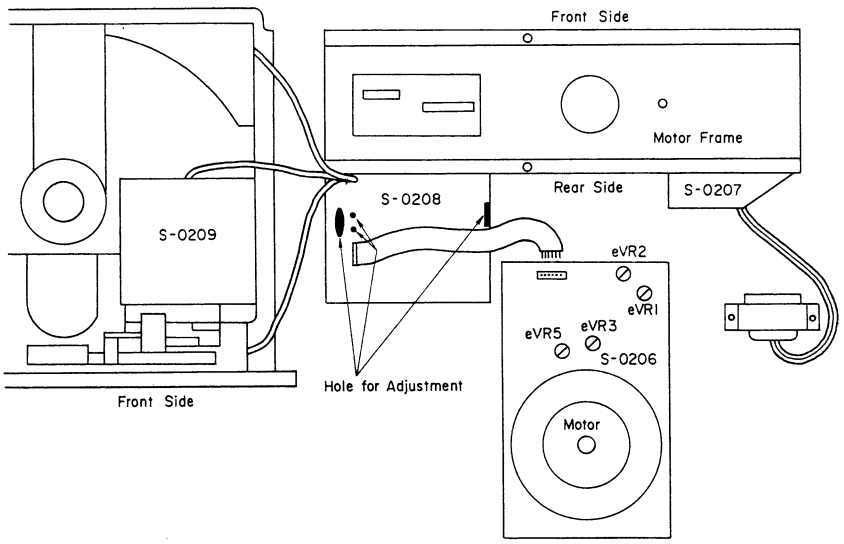

•Adjustment List (See Figs. 4-1 and 4-3 for points to be checked and adjusted)

	Adjustment Procedure	Checked Position	Adjusted Parts	Adjustment Contents	Adjusting Conditions
1	A-arm interrupter voltage adjustment	Between S-0209 TP5 and GND (fQ31 emitter) DC voltmeter	fVR2	2~2.5V	1. Without any record disk. 2. Stop DD motor. 3. Bring A-arm near lead-out position (B-arm read-in position) by the hand. 4. Adjust the voltage when A- or B-arm is moved to its extreme outside position by the hand. 2	B-arm interrupter voltage adjustment	Between S-0209 TP6 and GND DC voltmeter	fVR4	2~2.5V	
3	A-arm servo voltage adjustment	Between S-0209 TP4 and GND (on the positive side of arm servomotor) DC voltmeter	fVR1	−1V (It is preferable that the arm moves about 0.5mm toward the inside when lifter is down.)	1. Set a 30cm disk. 2. Stop DD motor. 3. Bring A-arm near lead-out position or B-arm near lead-in position by the hand. 4. Set lifter down by the hand.
4	B-arm servo voltage adjustment	Between S-0209 TP4 and GND (on the positive side of arm servomotor) DC voltmeter	fVR3	+1V (It is preferable that the arm moves about 0.5mm toward the inside when lifter is down.)	
5	A-arm speed adjustment	Time interval from when A-arm starts to when it stops. (A time device measurable up to seconds).	fVR11	4 secs. (The speed increases when fVR11 is rotated clockwise.)	1. Set a 30cm disk. 2. Stop DD motor. 3. Move A- or B-arm by use of ⊠, ⊠ key. 4. Check that A-arm moves from lead-out position to reset position with ALL a key kept depressed.
6	B-arm speed adjustment	Time interval from when B-arm starts to when it stops. (A time device measurable up to seconds).	fVR12	4 secs. (The speed increases when fVR12 is rotated clockwise.)	
7	A-arm height adjustment	Measure the height between disk surface and E, F sensor with a rule.	Height adjusting screw (See 7-5 on page 15).	Adjust the distance between record disk and sensor to 6.5~7mm. 	1. Set a 30cm disk. 2. Stop DD motor. 3. Move the arm to a position 10 away from the center of the disk by the hand. 4. Keep lifter in UP state.
8	B-arm height adjustment	Measure the height between disk surface and E, F sensor with a rule.	Height adjusting screw (See 7-6 on page 15).	Adjust the distance between record disk and sensor to 6.5~7mm. The distance between the disk bisecting plane perpendicular to the disk axis and sensor is to be adjusted to 7~7.5mm as shown below. 	1. Set a 30cm disk. 2. Stop DD motor. 3. Move B-arm to reset position by the hand. 4. Keep lifter in UP state. 5. The adjusting screw appears, if the main power switch is turned off when the disk base is pulled outward to its extreme position by depressing OPEN key without setting any record disk.
9	A-arm E-sensor sensitivity adjustment	Between S-0209 TP3 and GND (fIC16 Pin3) DC voltmeter	fVR5	2.8V±0.1V	1. Set a 30cm disk having no cut grooves. 2. Stop DD motor. 3. Move the arm to a position about 10cm away from the disk center by the hand. Since the adjusting control knob is not rotatable at this position, move the arm to the lead-in position only while rotating the adjusting control knob. 4. Adjust E sensor with the arm kept in UP state and F sensor with the arm kept in DOWN state.
10	A-arm F-sensor sensitivity adjustment	Between S-0209 TP2 and GND (fIC16 Pin26) DC voltmeter	fVR6	2.5V±0.1V	
11	B-arm E-sensor sensitivity adjustment	Between S-0209 TP3 and GND (fIC16 Pin3) DC voltmeter	fVR7	2.8V±0.1V	1. Set a 30cm disk having no cut groovs. 2. Stop DD motor. 3. Move the arm to a position about 10cm away from the disk center by the hand. Since the adjusting control knob is not rotatable at this position, move the arm to the lead-in position only while rotating the adjusting control knob. 4. Adjust E sensor with the arm kept in UP state and F sensor with the arm kept in DOWN state.
12	B-arm F-sensor sensitivity adjustment	Between S-0209 TP2 and GND (fIC16 Pin26) DC voltmeter	fVR8	2.5V±0.1V	

	Adjustment Procedure	Checked Position	Adjusted Parts	Adjustment Contents	Adjusting Conditions
13	A-arm E, F sensor lateral-direction adjustment (Perform this adjustment only where A-arm is in a bad condition even after E, F sensor sensitivity adjustment (Item 11 and 12) and E_2 signal-ready adjustment (Items 15 and 16) have been achieved.)	Between fIC1 Pin11 and GND DC voltmeter	E, F sensor adjustment screw	1. Start music reproduction by selecting a music having a short music intermission interval between two modulated grooves. 2. Adjust the arm so that the stylus comes down onto a position a little ahead of the short music intermission interval and an L-level voltage may be generated the instant the stylus moves across the short music intermission interval. 3. Be sure that the muting is off (music reproduction starts) beginning from the start of the selected music. 4. In the case of the B-arm, it is impossible to see the record disk surface. Therefore, select the same music as in the A-arm and start the music reproduction. The same adjustment as in the A-arm should be made after UP/DOWN indicator light goes off.	1. Set a 30cm disk having a short music intermission interval. 2. Set the sensitivity selector switch to H. 3. Rotate A- or B-arm E, F sensor adjusting screw counterclockwise to its extreme position to move the sensor at a position the nearest to the center of the disk. 4. Rotate delay adjusting control knob (fVR9 or fVR10) counterclockwise (MIN) to its extreme position.
14	B-arm E, F sensor lateral-direction adjustment (Perform this adjustment only where A-arm is in a bad condition even after E, F sensor sensitivity adjustment (Items 11 and 12) and E_2 signal-ready adjustment (Item 15 and 16) have been achieved.)	Between fIC1 Pin11 and GND DC voltmeter	E, F sensor adjusting screw		
15	A-arm E_2 signal delay adjustment	Stylus-down position during automatic music selection operation	fVR9	1. Repeatedly reproduce a music having a short music intermission interval between two modulated glooves by leading-in the arm onto a position a little ahead of the short music intermission interval. 2. Check that when the stylus goes down onto a position ahead of the short music intermission interval, the muting operation is off about 4 ~ 6 secs after the stylus tip is brought into contact with the disk. 3. In the case of the B-arm, it is impossible to see the record disk surface. Therefore, select the same music as in the A-arm and start the music reproduction. Be sure that the muting is off about 4 ~ 6 secs after the UP/DOWN indicator light goes off.	1. Set a 30cm disk having a short music intermission interval. 2. Set the sensitivity selector switch to H.
16	B-arm E_2 signal delay adjustment	Stylus-down position during automatic music selection operation	fVR10		
17	A-arm lead-in adjustment	Lead-in position	Adjusting cam	1. Lead-in the arm onto a 30cm disk during automatic disk selection operation and adjust the arm so that the stylus can come down onto the lead-in groove. 2. Check the lead-out operation, simultaneously. After the B-arm is led out, the A-am operation begins, the A-arm returns to its reset position. 3. Confirm 1.2 above in 17 cm disk as well.	1. Set the sensitivity selector switch to M. 2. Set a 30cm disk. 3. Set a 17cm disk after the above 30cm disk adjustment.
18	B-arm lead-in adjustment				
19	DD motor speed adjustment to 33rpm	Motor revolution speed	eVR1 S-0206	Adjust the motor speed so that a strobo pattern of 33rpm appears to be stopped. (only adjustment in the normal direction.)	1. Remove motor frame and place it as shown in Fig. 4-3 on page 6. 2. Put the strobo pattern center at the disk center and fix the pattern by a double-adhesive tape. 3. Remove the 6-lead parallel cord from board S-0206 as shown and then connect the +15V lead and the GND lead to 15V terminal and GND terminal of the 6-pin connector, respectively. 4. Connect a resistor to 6-pin connector as shown. 5. The motor speed can be selected as shown in the Table by switching the circuit. **Note)** There exists a set where apertures are formed in board F-O206 on the back side of eVR1 and eVR2. In the set of this type, it is possible to adjust the motor speed after setting a 30cm disk and mounting a strobo pattern on the disk, without removing the motor frame.
20	DD motor speed adjustment to 45rpm	Motor revolution speed	eVR2 S-0206	Adjust the motor speed so that a strobo pattern of 45rpm appears to be stopped.	
21	Mechanical sensors are used when eVR3 and eVR5 are replaced. In the case where eVR4 is mounted, do not touche it.

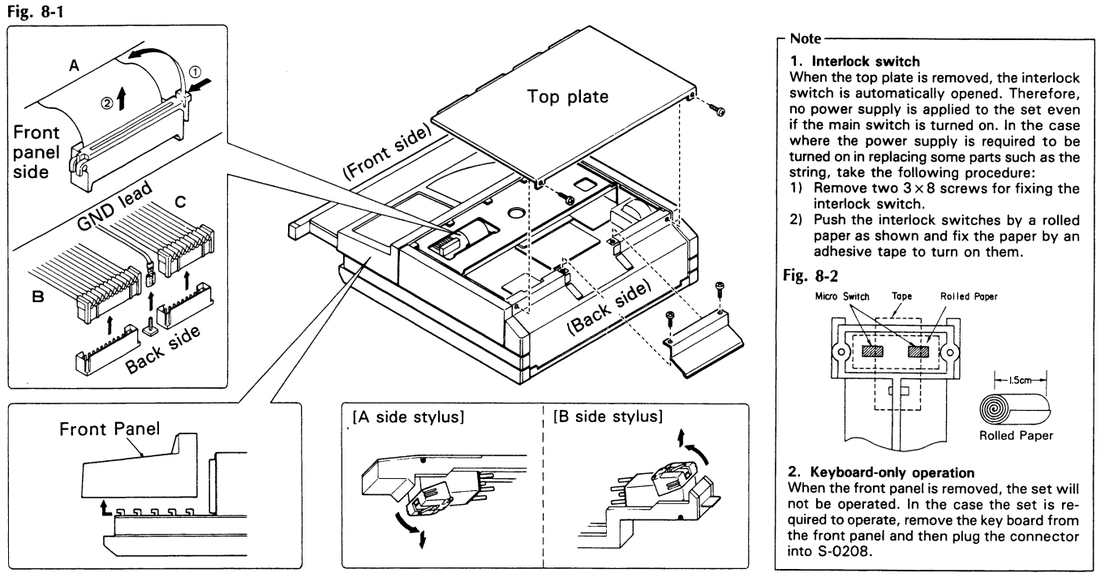
35	13289100	Switch Case
36	13266700	Wire Stopper (L plate) (Refer Fig.8-6 on page 16)

8. HOW TO REPLACE MAIN PARTS

A. Front panel and Stylus

1) Depress OPEN key to take out the disk base. Turn off the power supply by depressing the POWER switch when the disk base comes out about 10cm. Remove two 3×8 black screws from the back side, and the top plate.
2) Carefully extract the A-surface stylus holder in the arrow direction as shown while holding the cartridge by the hand. Mount a new stylus by carefully pushing it in the opposite direction. Take care not to touch the finger to the stylus tip.
3) Mount the top plate and turn on the power supply. Then, turn off the power supply the moment the A-arm comes near the front panel window.
4) Disconnect three connectors A, B, C and GND lead.
5) Carefully pull the front panel toward you and remove the right- and left-side stoppers, separately. Take care that the connector is not caught by other parts.
6) In the same way as in the A-surface stylus holder, carefully extract the B-surface stylus holder in the arrow direction as shown while holding the cartridge by the hand. Take care not to touch the finger to the stylus tip.
7) Fit the front panel to the right- and left-side stoppers and then connect the connectors A, B, C and the GND lead.
In doing this, take care that the power switch is not brought into contact with the under surface of the panel. Further, in fitting the connector, do not apply an excessive force to the board.
8) Fix the rear side cover and the top plate by two screws, respectively.
9) Check that the disk base is automatically pulled in when the power switch is turned on.

Fig. 8-1



Note

1. Interlock switch
When the top plate is removed, the interlock switch is automatically opened. Therefore, no power supply is applied to the set even if the main switch is turned on. In the case where the power supply is required to be turned on in replacing some parts such as the string, take the following procedure:
1) Remove two 3×8 screws for fixing the interlock switch.
2) Push the interlock switches by a rolled paper as shown and fix the paper by an adhesive tape to turn on them.

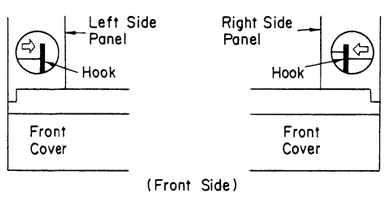
Fig. 8-2

2. Keyboard-only operation
When the front panel is removed, the set will not be operated. In the case the set is required to operate, remove the key board from the front panel and then plug the connector into S-0208.

B. Front cover (See Fig. 8-3)

1) Unhook the front cover through the apeatures formed on this side of the right- and left-side panel and then extract the front cover toward you.

Fig. 8-3



C. How to remove keyboard

1) Remove the top plate and front panel.
2) Remove two 3×8 screws for fixing the keyboard to the front panel.

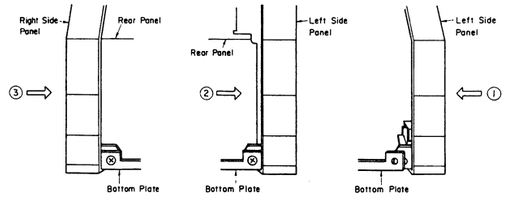
D. How to remove side panels (See Fig. 8-4)

1) Remove the top plate, front panel and front cover.
2) Remove two 3×8 screws for fixing the side panels and top plate.
3) Extract the right- and left-side panels.
4) Remove the rear panel.

E. How to install side panels (See Fig. 8-4)

1) Fit the left-side panel to the bottom plate. ①
2) Fit the back-side panel to the left-side panel and then fix it with the 3×8 screws. ②
3) Fit the right-side panel to the bottom plate and the back-side panel and then fix it with the 3×8 screws. ③
4) Fit the front cover to the right- and left-side panels.

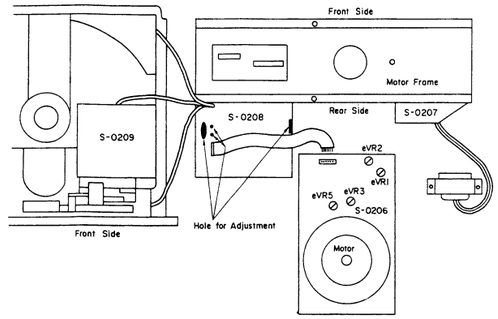
Fig. 8-4



F. How to remove disk driving DD motor with control board

1) Remove the top plate, front panel, front cover, right- and left-side panels, and back-side panel.
2) Remove four 4×8 binding screws for fixing the motor frame.
3) Place the removed motor frame on the right hand of the set with it set front-side back.
4) Remove three 4×12 screws for mounting the motor.

Fig. 8-5



G. How to remove A-arm assembly and lifter assembly (See page 15)

1) Remove the top plate and front panel.
2) Disconnect the lead extending from the arm of board S-0211.
3) Remove a 2×4 binding screw for mounting board S-0211.
4) Remove two 2×4 flat-head screws for fixing the lifter assembly.

H. How to remove B-arm assembly and lifter assembly (See page 15)

1) Remove the top plate, front panel, front cover, right- and left-side panels, back-side panel, and motor frame.
2) Set the B-arm at its reset position by pulling the table disk to its extreme end. (Turn on OPEN key and then off when the disk base is pulled out extremely.)
3) Remove the B-arm stylus.
4) Remove two 3×8 screws fixing the arm plate.
5) Perform the same procedure from (2) to (4) stated in item G above.

I. How to remove disk base and disk plate (See Fig. 8-7)

Fig. 8-6

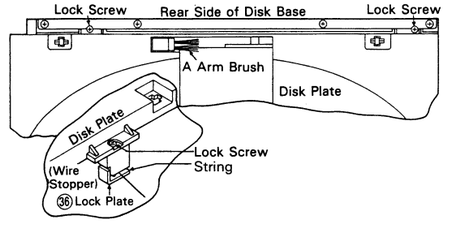


Fig. 8-7

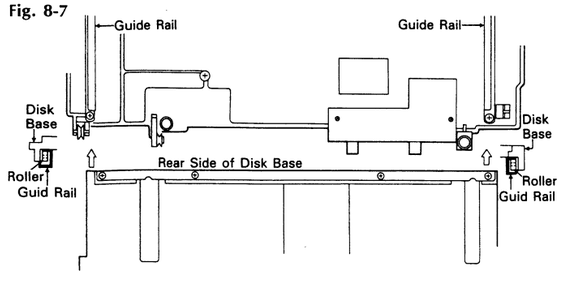
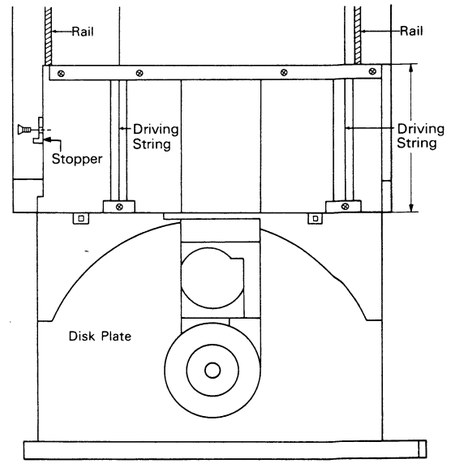


1) Remove the top plate, front panel, front cover, right- and left-side panels, and back-side panel.
2) Pull the disk base table toward you to its extreme front end by depressing OPEN key.
3) Loosen screws for fixing mechanism-driving strings to the disk table. Remove the metal fixture from the string. (Take care not to remove the fixture from the string by excessively lossening the screw.)
4) Remove a 3×8 fixture screw positioned on the left side of the disk base.
5) Extract the disk base together with the disk plate.

J. How to install disk base and disk plate (See Figs. 8-6, 8-7, and 8-8)

1) Depress OPEN key to move the movable pulley P_1 to position A, the movable pulley P_2 to position C and the A and B-arms to positions E and F, respectively.
2) Fit the disk plate onto the disk base.
3) Mount the disk plate onto the rail and then push it about 10cm. Fix the disk plate with a metal fixture located at the left end of the disk base.
4) Pull the disk plate to its extreme front end and then hang two right and left strings on the string fixing fixture located on the plate end portion.
5) By depressing OPEN/CLOSE key, push the disk table to its extreme rear position by the hand, when the movable pully P_1 moves from position A to position B, as shown in Fig. 7-3 on page 14.
6) Push the disk plate to a position where the disk plate is tightly in contact with the rear portion of the disk base.
7) Tighten two string fixing screws. The string drives the mechanism of the disk plate.
8) Be sure that the disk base and disk plate move normally by depressing OPEN/CLOSE key.

Fig. 8-8

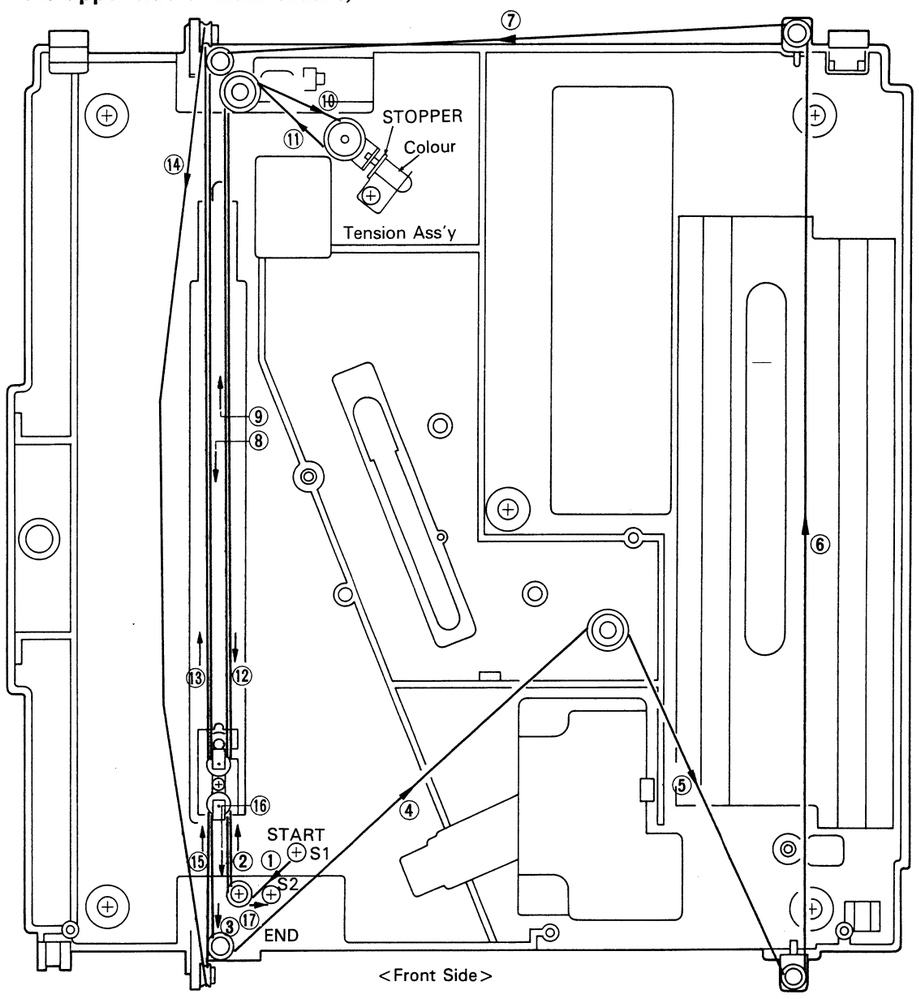


K. How to remove drive gear assembly and arm servomotor (See Fig. 7-7 on page 15)

1) Set the A-arm at it extreme rear position. (Turn on OPEN Key and turn off the main switch when the A-arm reaches the extreme rear end position.)
2) Remove the top plate, front panel, front cover, right- and left-side panels and the rear panel.
3) Remove the disk plate and disk base.
4) Remove screws for mounting the arm servomotor.
5) Remove screws for mounting the drive gear assembly.

9. HOW TO REPLACE MECHANISM DRIVING STRING

(On the upper side of main chassis)



•Replacement procedure

1. Remove the top plate, front panel, side plates and rear panel.
2. Remove the motor frame.
3. Remove the disk table and disk plate.
4. Make a knot around the screw S_1, stretch the string in accordance with procedure from 1 to 17, and tie up the string end around the screw S_2.
5. After having assembled the set completely, turn on the main switch to make sure that the disk table and disk plate opens or closes normally and that the normal music reproduction can be made.

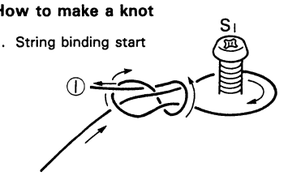
Note) Adjust the tension of the streched string by the use of the adjusting screw of the tension assemble so that the collar is brought into contact with the stopper as shown above.

Parts List

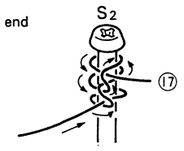
Parts No.	Stock No.	Description
1	60360530	Driving String (3m)
2	13303500	Tension Roller Ass'y

*** How to make a knot**

1. String binding start

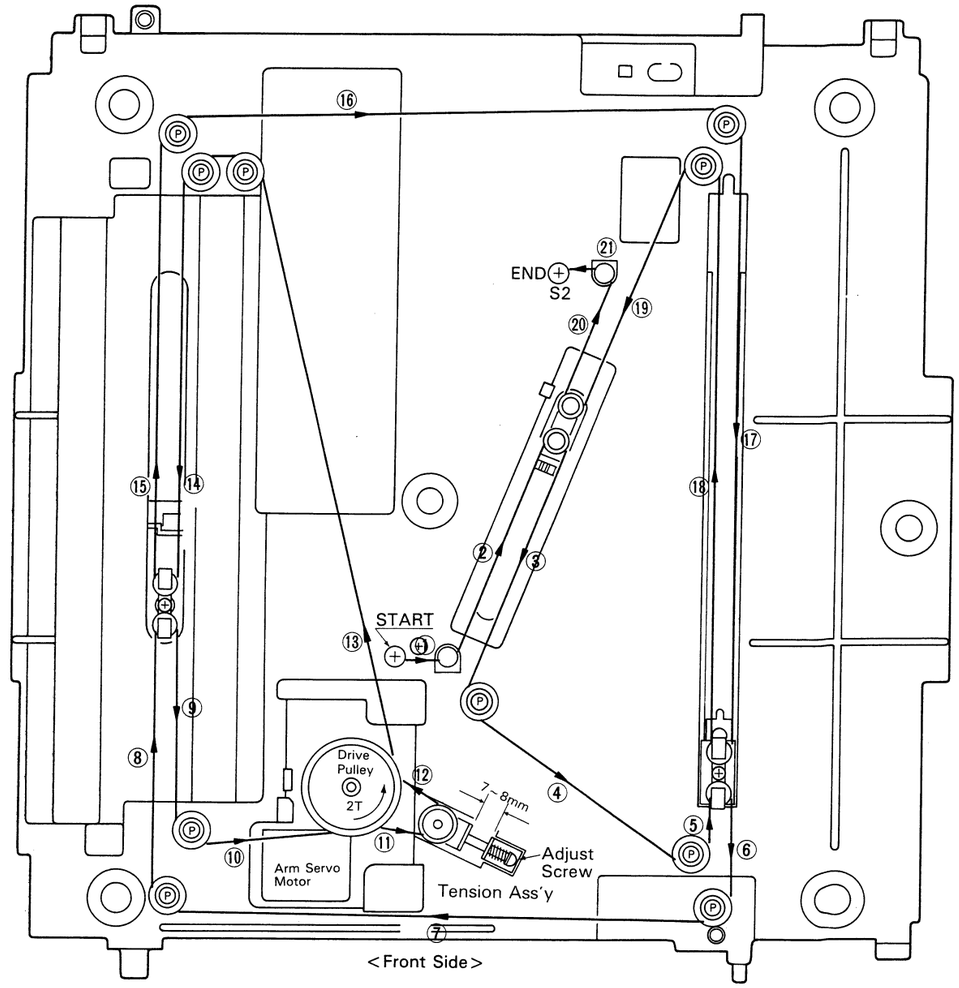


2. String binding end



10. HOW TO REPLACE MECHANISM DRIVING STRING

(On the back side of main chassis)



•Replacement procedure

1. Remove the top plate, front panel, side plates and rear panel.
2. Remove the motor frame.
3. Remove the disk table and disk plate.
4. Remove four screws for fixing the main chassis, and then turn the main chassis upside down.
5. Make a knot around the screw S_1, stretch the string in acordance with procedure from 1 to 21, and tie up the string end around the screw S_2.
6. After having assembled the set completely, turn on the main switch to make sure that the disk table and disk plate opens or closes normally and that the normal music reproduction can be made.

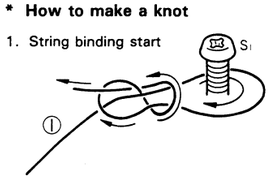
Note) Adjust the tension of the stretched string by the use of the adjusting screw of the tension assembly as shown above.

Parts List

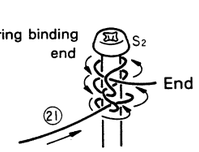
Parts No.	Stock No.	Description
1	60360530	Driving String (3m)
2	07600910	Tension Ass'y

*** How to make a knot**

1. String binding start



2. String binding end



*** How to bind the string around drive pully**

SYMBOL
△ Ceramic
Ⓜ Mylar
Ta Tantalum Electrolytic
◒ Low-Leak Electrolytic
(B.P) Bi-Polar Electrolytic
⊡ Non Inflammable Resistor

RESISTORS
Are in ohms, 1/4 Watts, ±5% Tolerance
Unless Otherwise Noted. k: kΩ, M: MΩ

CAPACITORS
Are in μF, Unless Otherwise Noted. P: pF

Each D.C Voltage measurd by the instruments discribed below shows the nominal value in volts of 33 1/3 rpm
Measuring instrument
Volt Meter
Oscilloscope

Electrolytic Capacitor : Capacitance 1μF1 / Volt 1V1

⚠ is Safety Part.
Use only replacement parts recommended by the manufacturer.

SYMBOL OF FUNCTION
(e) MO. CONTROL
(f) TONE ARM CONTROL
(g) INDICATOR
(h) POWER SUPPLY
